- Operational Risk Analyst

Tech & Data
- MI Analyst
- Systems Analyst
- Information Security Analyst
- Business Continuity Mgr
- Risk Investigator
- Operational Risk Analyst

The impact- going from A to B

> The training has streamlined my reporting processes, **reduced report creation time by 75%**, improved trend analysis, and allowed for more relevant visualisations and dashboards that refresh automatically, **saving approximately 1 day a week**.

> I've become the MI person for my entire team due to the training, providing daily, weekly, and ad hoc data for heads of department, and significantly **reducing the time spent on data extraction from 6 hours to 1 hour**.

> The training has enabled me to streamline the team's KPI tracking process, automating it with formulas and **reducing the time spent from 3 to 4 hours down to 1 hour**, resulting in increased efficiency in monitoring monthly KPIs for team members.

> **Using a HR dashboard with PowerBI -a tool that hadn't been utilised in the team before**

> The learning, particularly on Excel, has made me more effective in my role by enabling skills to summarise data, create graphs, and identify problem areas before presenting to leadership, **resulting in a time saving of 50%**.

> PowerQuery in Excel has been a significant time-saver, as **tasks that used to take me 3 hours now take only 10 minutes**.

> Skills from the training (including **Power-BI**) has made ad hoc requests faster and more efficient, **reducing time spent by about 2/3 days to 5 hours**, making the team more self-sufficient and delivering more detailed.

> **The projects embedded in the training are aligned to my business which is invaluable**
